environment is the primary criterion for designing, constructing, and operating a vacuum system. A wide range of vacuum environments is discussed, from rough to ultrahigh vacuum, with emphasis on achieving a well-defined degree of vacuum. Role of Vacuum in Food science and Technology:- The applications of Vacuum science and Technology are very vast. From space technology to accelerator technology and from nanotechnology to food science. In this seminar the applications of vacuum in food science will be discussed and it will be highlighted that use of vacuum can enhance the quality of food. The main focus will be on use vacuum in freeze drying, food packaging, food preservation etc. Vacuum Science and Technology:- Vacuum is a central commodity in the technology for manufacturing a host of products which are now part of everyday living, such as microelectronic and optoelectronic devices, TV screens, photovoltaic panels and pharmaceuticals, as well as in scientific research. Producing and maintaining a vacuum and knowing its properties therefore concerns a large number of people who work in these areas. Although these activities span a wide field there is a relatively small body of basic underlying knowledge that is common to all of them. In this training course the basic of Vacuum Science and Technology will be discussed in detail. The last date of registration is 30 September, 06 & 11 October, 2015.
